# Technology

...cost effective

Understanding the latest technologies assist BD+M to produce practical and cost effective designs. Whether working on building construction, refurbishment, furniture or components, BD+M confidently combine products which are commercially available alongside elements designed specifically for the purpose. Whenever practicable, BD+M seek repetition of components in order to improve both economy and quality control.

...intelligent

In BD+M's design office, potential technologies are regularly explored in a deliberate effort to increase efficiency. Electronic document control systems assist with the management of information for all projects and the use of 3D CADD, DTP and project management software ensure consistently high levels of performance and presentation. Dumb drawings are replaced with virtual 3D intelligent project models. Internet data links with suppliers, manufacturers and clients as well as other professionals are sought to promote efficiencies and improve communications.
